INTRODUCTION TO TRADITIONAL AND MODERN GOLIC VULCAN GRAMMAR

Ragtaya na'Zhit-Isan Ba-Gol- heh Iyi-Gol-Vuhlkansu

Traditional Golic Vulcan (TGV), also known incorrectly to offworlders as "Old Vulcan", "High Vulcan", "Ceremonial Vulcan", "Liturgical Vulcan", etc., dates from the time of Surak and his original followers, and is descended from "Ancient Golic Vulcan", the language spoken at least 25,000 years ago on the Plains of Gol and surrounding regions. Its directly-descended modern form is called Modern Golic Vulcan (MGV). (Another relative of Ancient Golic Vulcan is the extinct FthinraKathi, which is briefly discussed separately on our site.) Traditional Golic continues to be spoken in ceremonial usage, at schools of various disciplines (such as those at the religious centers of Gol and Mount Seleya), by poets and writers of certain styles of literature, by devout followers of Surak's teachings, and by members of many old clans affiliated with Surak. It is one of three "official" languages of the planet Vulcan (T'Khasi) and all educated Vulcans speak the language in addition to their own regional dialects and Modern Standard Vulcan (a separate language not covered on our site), somewhat like the status Latin had for something like 1,500 years on Earth. Modern Golic is the dialect spoken in day-to-day use by most people who live in the Gol region.

Philologists and linguists from outside T'Khasi often use the incorrect term "Old High Vulcan" in Federation Standard English (FSE) to describe the traditional form of the Golic Vulcan language, although this has lead to much confusion. The linguistic experts from T'Khasi itself call this language >Ba-Golik< (Traditional Golic) or more formally, >Ba-Gol-Vuhlkansu< (Traditional Golic Vulcan). The modern form is often incorrectly called "High Vulcan" by offworlders but >Iyi-Golik< (Modern Golic) or >Iyi-Gol-Vuhlkansu< (Modern Golic Vulcan) by the Vulcans. This is roughly similar to the difference between the King's English and American English on Earth -- the first lead to the second and, although they have their differences, they are still, for the most part, the same language. "GV" is used if the information covers all of the Golic Vulcan languages.

Grammar Fundamentals

TGV and MGV are "compounding" languages. Basic words and roots are put together to make new words, a lot like the Germanic languages of Earth. For example, the GV for "mouth" is "ru'lut" and for "water" or "fluid" is "masu". If you combine the two smaller words, you get "ru'lut-masu", which means "saliva" (literally "mouth-water"). Some ancient compound words, like "kun-ut" ("marriage" or "bonding") have lost their separate meanings. Also, some adopted ancient words are no longer obvious compounds. Most compound words have a " - " ("pakh", similar to a hyphen) separating their roots.*Saga'sek's Third Word Law* states, *"No more than three root words can combine to form a compound word, although a full word triad can take prefixes and suffixes."* For example, "fal-tor-pan" is possible (as is "na'fal-tor-pan" or "fal-tor-pan'es"), but *never* something like "ahn-wun-san-zhel" (which should be written "san-zhel t'ahn-wun"). Students should learn to split up compound words to analyze their roots.

Another important point with TGV/MGV can be made by using a rough comparison with Old Icelandic and Modern Icelandic from Earth. Modern Icelandic builds up new vocabulary by "recycling" an obsolete word or a word from the older language. TGV/MGV does this as well. One of many examples is the term for "computer" which is based on the old word "tum", meaning "tally" and the common "vel", meaning "thing". "Tum-vel" literally means "tally(ing) thing", but is used for modern terminology. Reminants of this can be found in many other languages as well.

TRADITIONAL & MODERN GOLIC VULCAN - FEDERATION STANDARD ENGLISH DICTIONARY

(компиляция от Агентства Переводов WordHouse)

TGV and MGV are also affixing languages. Prefixes and suffixes are added to words (simple or compound) to modify them. In GV, nearly all words corresponding to prepositions are prefixes. These are usually separated from the word they modify by a Vulcan "half-stop" ("ulef-pekhaya") or " ' " (similar to an apostrophe). For example, "etwel" means "us" but "k'etwel" means "with us" and "s'etwel" means "from us". Suffixes are also important. They can be directly affixed, or separated by " ' " or " - ". For example, "fonn" (loyal) and "fonn'es" (loyalty) or "kan" (child) and "kan-fam" (childless). When new to the language, it is easy to confuse a compound word with a suffixed word. Also, certain ancient words handed down or adopted from now-extinct languages, like "t'forti" (finally), may look like they are prefixed but they are not. Memorizing the historical exceptions will help to prevent confusion later on.

Finally, TGV and MGV are "syntactic languages", meaning sentence construction and word order can determine shades of meaning. There are no declensions and practically no inflections to cause confusion.

Verb-Noun Word Pairs

Most TGV/MGV words come in what are called verb-noun word pairs. If you know the verb, you can often determine the related noun, or vice versa. Most TGV/MGV verb-noun pairs follow one of several standard patterns. The table below shows the most common forms with sample words:

Type	Noun ending	Noun	Verb	Comments
1	**(none)**	**saul** (shout)	**saul-tor**	most common; bare root plus **-tor** to make verb
2	**(varied)**	**ha'kiv** (life)	**ha-tor**	ancient compound with root extracted plus **-tor**
3	**(varied)**	**talal** (find)	**tal-tor**	noun variant to prevent similar word confusion
4	**(varied)**	**esta** (touch)	**estuhl**	ancient words, highly irregular with no pattern
5	**an**	**psthan** (search)	**pstha**	ancient words, **n** added to verb to make noun
6	**an**	**tevan** (fall)	**tev-tor**	pre-Surak words, **an** dropped and **-tor** added
7	**aya**	**shaya** (break)	**shau**	**u** dropped from verb, **ya** added to make noun
8	**~n**	**shen** (rise)	**she-tor**	pre-Surak words, **n** dropped and **-tor** added
9	**shan**	**reshan** (rage)	**resha**	pre-Surak words, **n** added to verb to make noun

Sentence Order

As a syntactic language, sentence order is very important in TGV and MGV. The verb is almost always placed first in the sentence, although it may move for emphasis. Subjects are placed before objects in

the sentence. The language tends to be "contextual" in that understood or previously mentioned things are seldom repeated, unless needed for emphasis. Non-Vulcans sometimes have a tough time understanding a conversation when pronouns, subjects and objects are dropped out. Vulcans usually find it wasteful to use more words than are truly necessary to get a point across. Normally full word usage is only done in teaching situations or formal literature.

Stress

The position of stress varies in GV words, although purists often put the stress on the second part of a compound. There is much variation due to the language reforms that were left incomplete after the death of Surak. Pronunciation guides using phonetic symbols appear in the GV-FSE Dictionaries. *Remember not to count prefixes and suffixes when determining stress.* The root word, whether compound or not, is often what stress is based on.

Alphabet(s)

The alphabetic system used in Traditional Golic Vulcan (and Lowlands Golic Vulcan) is made up of 30 symbols in all. The Traditional Golic Vulcan order of their letters is:

S T P K R L A D O E V U H G Ch I N Z M Y F W B Sh Th Kh Zh Ts Dzh Ks

The alphabetic system used in Modern Golic Vulcan is made up of 27 symbols in all. The Modern Golic Vulcan order of their letters is:

S T P K R L A Sh O U D V Kh E H G Ch I N Zh M Y F Z Th W B

Articles

There is no definite article in GV. For example, the word "ek'zer" can mean "jewel" or "the jewel". Although this is confusing to many non-Vulcans, the Vulcans have no trouble because context dictates the intent. The use of indefinite articles (a, an) is rare in Modern Golic (and Lowlands Golic) usage and normally used only for emphasis. In Traditional Golic, they are nearly always used unless understood or deemed superfluous.

Plurals

Plurals are often understood through context or by the use of pluralizing words, such as a number. In those cases, the word does not change its form. A pluralizing direct suffix (~lar) exists in TGV and MGV, similar to the "~s" of FSE.

When a construction like "a flock of birds" or "a pod of whales" is used in FSE, the type of animal is pluralized. In GV, equivalent constructions are *not* pluralized, since the collective word automatically indicates there is more than one animal. For example, "treit t'kushel" (literally, "flock of bird") or "kuht t'sehlat" (literally, "herd of sehlat").

Punctuation

TRADITIONAL & MODERN GOLIC VULCAN - FEDERATION STANDARD ENGLISH DICTIONARY

(компиляция от Агентства Переводов WordHouse)

In Traditional and Modern Golic Vulcan, there are five main marks used in punctuation:

" - " pakh (stroke) - used in affixing or compounding words, and as a comma or semi-colon is used in FSE
" -- " dah-pakh (double-stroke) - used as a colon or long dash is used in FSE
" ' " ulef-pekhaya (half-stop) - used to separate affixes from base words
" . " ek'pehkaya (full-stop) - used as a period is used in FSE
" .. " dah-pehkaya (double-stop) - used for emphasis, similar to an exclamation mark in FSE

Many Vulcans use what is called ek'pakh (full-stroke), a line about the length of three pakh marks, instead of dah-pakh. This is the older form and is preferred in literature or religious texts. The writings of Surak always use the ek'pakh instead of the dah-pakh. The dah-pakh was popularized by its use in the media script and we will use it here for typographic reasons.

As stated before, there is no question mark in Golic Vulcan. There are additional specialized symbols used in typography and science, but we will not discuss them in this particular material. A future page may focus on typographic and scientific symbols. Language Lesson 6 expands on the subject of punctuation.
